Final Assignment

Ehsan Abdollahi Nasab

January 26, 2025

1 Git and GitHub

1.1 Repository Initialization and Commits

Write about how you set up the repository for this assignment. Explain every step in detail. For this I used GitHub website. I chose "Create New..." then "New Repository". After that I set the Repository; named it "FinalAssignment", chose it to be "Public" and add a "README file".

1.2 GitHub Actions for LaTeX Compilation

Provide a walkthrough of setting up GitHub Actions to automatically compile your LaTeX document and any challenges you encountered.

2 Exploration Tasks

2.1 Vim Advanced Features

Explore and document 3 advanced features of Vim that were not covered in class.

3 Git & FOSS

3.1 Issues

Create a sample issue in the repository below and attach its screenshot in your LaTeX document: https://github.com/MiliAxe/CW-Final

3.2 FOSS contribution

Do you see yourself contributing to FOSS projects in the future? If yes, what kind of projects are you interested in contributing to? If no, why not?
